### DETAILED ACTION

1. Claims 1-22 are presented for examination.
2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-22 are rejected under the judicially created doctrine of obviousness - type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,704,764. Although the conflicting claims are not identical, they are not patentably distinct from each other. In particular, as to claims 1, 8, U.S. Patent No. 6,704,764 teaches providing a separate Java Virtual Machine to instantiate a thread in a data processing system, such that the processor: receives at least one request for service (claim 1, line 4); identifies a resource requested and a class corresponding to the resource (claim 1, lines 5-6); if a virtual machine is available, reuses the available virtual machine by a single thread only by loading the virtual machine to instantiate the thread corresponding to the requested resource, wherein the virtual machine is

available if the virtual machine has a matching process identification and thread identification and is not busy (claim 1, lines 7-13); and if the virtual machine is unavailable, spawns and loads a new virtual machine to instantiate the thread corresponding to the requested resource, wherein the virtual machine is unavailable if either the virtual machine does not have the matching process identification and thread identification or is busy (claim 1, lines 14-19). As to claims 2, 9, 16, these are met by U.S. Patent No. 6,704,764, claim 2. As to claims 3, 10, 18, these are met by U.S. Patent No. 6,704,764, claim 3. As to claims 4, 11, 19, these are met by U.S. Patent No. 6,704,764, claim 4. As to claims 5, 12, 20, these are met by U.S. Patent No. 6,704,764, claim 5. As to claims 6, 13, 21, these are met by U.S. Patent No. 6,704,764, claim 6. As to claims 7, 14, 22, these are met by U.S. Patent No. 6,704,764, claim 7. As to claim 15, it is met by U.S. Patent No. 6,704,764, claim 10. As to claim 17, it is met by U.S. Patent No. 6,704,764, claim 1, line 5.
